

Environmental Policy

At Bug Doctor, we are committed to conducting pest control operations in an environmentally responsible manner. Our policy focuses on minimising the impact on the ecosystem and promoting sustainable practices. We prioritise the use of non-toxic and low-toxicity pest control methods, such as integrated pest management (IPM) techniques, to reduce chemical usage. We aim to preserve biodiversity and protect non-target organisms by targeting pests specifically. We comply with all relevant environmental regulations and strive to continuously improve our environmental performance through employee training, regular audits, and the adoption of eco-friendly technologies. By integrating environmental considerations into our pest control practices, we aim to contribute to a healthier and more sustainable planet.
