

Health and Safety Policy

At Bug Doctor, we prioritise the health and safety of our employees, contractors, and customers during pest control operations. Our policy ensures the identification and management of potential hazards, proper use of personal protective equipment (PPE), compliance with regulations, and regular training on safe work practices. We conduct thorough risk assessments, provide necessary PPE, and maintain equipment for optimal safety. Chemical handling and storage follow strict guidelines. By adhering to this policy and promoting a culture of safety, we aim to create a secure environment for all involved in pest control activities.
